練習題 13.1

$$\begin{aligned}
 2. \text{證: } L.H.S. &= \|\vec{x} - \vec{y}\|^2 \\
 &= \langle \vec{x} - \vec{y}, \vec{x} - \vec{y} \rangle \\
 &= \langle \vec{x}, \vec{x} \rangle + \langle \vec{y}, \vec{y} \rangle - 2\langle \vec{x}, \vec{y} \rangle \\
 &= \|\vec{x}\|^2 + \|\vec{y}\|^2 - 2\|\vec{x}\|\|\vec{y}\|\cos\theta = R.H.S.
 \end{aligned}$$

$$\begin{aligned}
 3. \text{證: } L.H.S. &= \|\vec{x} + \vec{y}\|^2 \\
 &= \langle \vec{x} + \vec{y}, \vec{x} + \vec{y} \rangle \\
 &= \langle \vec{x}, \vec{x} \rangle + \langle \vec{y}, \vec{y} \rangle + 2\langle \vec{x}, \vec{y} \rangle \\
 &= \|\vec{x}\|^2 + \|\vec{y}\|^2 + 2 \cdot 0 = \|\vec{x}\|^2 + \|\vec{y}\|^2 = R.H.S.
 \end{aligned}$$

$$\begin{aligned}
 4. \text{證: } L.H.S. &= \|\vec{x} + \vec{y}\|^2 + \|\vec{x} - \vec{y}\|^2 \\
 &= \|\vec{x}\|^2 + \|\vec{y}\|^2 + 2\langle \vec{x}, \vec{y} \rangle + \|\vec{x}\|^2 + \|\vec{y}\|^2 - 2\langle \vec{x}, \vec{y} \rangle \\
 &= 2(\|\vec{x}\|^2 + \|\vec{y}\|^2) = R.H.S.
 \end{aligned}$$

$$\begin{aligned}
 5. \text{證: 任取 } \vec{c} \in B_r(\vec{a}) \cap B_r(\vec{b}), \text{ 都有 } \|\vec{a} - \vec{c}\| < r, \|\vec{c} - \vec{b}\| < r \\
 \Rightarrow \|\vec{a} - \vec{c}\| + \|\vec{c} - \vec{b}\| < 2r = \|\vec{a} - \vec{b}\|
 \end{aligned}$$

但由三角不等式知, $\|\vec{a} - \vec{c}\| + \|\vec{c} - \vec{b}\| \geq \|\vec{a} - \vec{b}\|$, 矛盾.

因此所以 $B_r(\vec{a}) \cap B_r(\vec{b}) = \emptyset$

$$\text{證: 因為 } \sum_{i=1}^n \sum_{j=1}^n (x_i - x_j)^2 \geq 0$$

所以

$$\begin{aligned}
 6. \text{證: } \sum_{1 \leq i, j \leq n} (x_i - x_j)^2 \geq 0 &\Leftrightarrow n \sum_{i=1}^n x_i^2 + n \sum_{j=1}^n x_j^2 - 2 \sum_{1 \leq i, j \leq n} |x_i| |x_j| \geq 0 \\
 &\Leftrightarrow n \sum_{i=1}^n x_i^2 - \sum_{1 \leq i, j \leq n} |x_i| |x_j| \geq 0 \\
 &\Leftrightarrow n \|\vec{x}\|^2 \geq \left(\sum_{i=1}^n |x_i| \right)^2 \Leftrightarrow \|\vec{x}\| \geq \frac{1}{\sqrt{n}} \sum_{i=1}^n |x_i|
 \end{aligned}$$

由此可取 $K_1 = \frac{1}{\sqrt{n}}$

另一方面, $\left(\sum_{i=1}^n |x_i|\right)^2 = \sum_{i=1}^n x_i^2 + \sum_{1 \leq i \neq j \leq n} |x_i| |x_j| \geq \sum_{i=1}^n x_i^2 = \|\vec{x}\|^2$

$$\Rightarrow \sum_{i=1}^n |x_i| \geq \|\vec{x}\|, \text{ 取 } K_2 = 1.$$

7. 由上題知

$$\frac{1}{\sqrt{n}} \max\{|x_i|\} \leq \frac{1}{\sqrt{n}} \sum_{i=1}^n |x_i| \leq \|\vec{x}\| \leq \sum_{i=1}^n |x_i| \leq n \max\{|x_i|\}.$$

所以 ~~K_1~~ $M_1 = \frac{1}{\sqrt{n}}, M_2 = n$

練習題 13.2

1. 證: $\lim_{n \rightarrow \infty} \vec{x}_n = \left(\lim_{n \rightarrow \infty} \frac{1}{n}, \lim_{n \rightarrow \infty} \sqrt{n} \right) = (0, 1)$

2. 證: 1°, $\forall \varepsilon > 0, \exists N_0 \in \mathbb{N}^+, \forall n > N_0, \text{ 有 } \|\vec{x}_n - \vec{a}\| < \frac{\varepsilon}{2}, \text{ 且 } \|\vec{y}_n - \vec{b}\| < \frac{\varepsilon}{2}$

$$\text{則 } \|(\vec{x}_n \pm \vec{y}_n) - (\vec{a} \pm \vec{b})\| = \|(\vec{x}_n - \vec{a}) \pm (\vec{y}_n - \vec{b})\| \leq \|\vec{x}_n - \vec{a}\| + \|\vec{y}_n - \vec{b}\| < \frac{\varepsilon}{2} + \frac{\varepsilon}{2} = \varepsilon$$

$$\Rightarrow \lim_{n \rightarrow \infty} (\vec{x}_n \pm \vec{y}_n) = \vec{a} \pm \vec{b}$$

2° 當 $\lambda = 0$ 時, $\lim_{n \rightarrow \infty} (0 \cdot \vec{x}_n) = \vec{0}$

當 $\lambda \neq 0$ 時, $\forall \varepsilon > 0, \exists N_0 \in \mathbb{N}^+, \forall n > N_0, \text{ 有 } \|\vec{x}_n - \vec{a}\| < \frac{\varepsilon}{|\lambda|} \Leftrightarrow \|\lambda \vec{x}_n - \lambda \vec{a}\| < \varepsilon$

$$\Rightarrow \lim_{n \rightarrow \infty} (\lambda \vec{x}_n) = \lambda \vec{a}$$

3. 證: 對於任一收斂點列 $\{\vec{x}_n\}$, 設 $\lim_{n \rightarrow \infty} \vec{x}_n = \vec{a}$

取 $\varepsilon = 1$, 則 $\exists N_0 \in \mathbb{N}^+, \forall n > N_0, \text{ 有 } \|\vec{x}_n - \vec{a}\| < 1 \Leftrightarrow \vec{x}_n \in B_1(\vec{a})$

則有 $\|\vec{x}_n\| \leq \|\vec{a}\| + \|\vec{x}_n - \vec{a}\| < 1 + \|\vec{a}\|$

記 $r = \max_{1 \leq n \leq N_0} \{\|\vec{x}_n\|\}$, 則 $\forall n \in \mathbb{N}^+$, 都有 $\vec{x}_n \in B_{(1+r+\|\vec{a}\|)}(\vec{0})$, 有界.

5. $\sum_{k=1}^{\infty} \|\vec{x}_{k+1} - \vec{x}_k\|$ 收斂 $\Leftrightarrow \forall \varepsilon > 0, \exists N_0 \in \mathbb{N}^+, \forall k > N_0$ 且 $p \in \mathbb{N}^+$

都有 $\varepsilon > \left| \sum_{s=k+1}^{k+p} \|\vec{x}_{s+1} - \vec{x}_s\| \right| \geq \|\vec{x}_{k+p+1} - \vec{x}_{k+1}\| \Rightarrow \lim_{k \rightarrow \infty} \{\vec{x}_k\}$ 收斂

練習題 13.3

1. (1) $\forall a \in A, \exists n \in \mathbb{N}^+$, 使得 $a = \frac{1}{n}$

當 $n \geq 2$ 時, $\frac{1}{n+1} < \frac{1}{n} < \frac{1}{n-1}$. 當 $r < \frac{1}{n(n+1)}$ 時, $B_r(a) \not\subset A$

當 $n=1$ 時, 當 $r < \frac{1}{2}$ 時, $B_r(1) \not\subset A$

$\Rightarrow A^\circ = \emptyset$

因為 $A = \{\frac{1}{k} \mid k \in \mathbb{N}^+\}$, $\lim_{k \rightarrow \infty} \frac{1}{k} = 0$, 所以 $A' = \{0\} \Rightarrow \bar{A} = \{0\} \cup A$

$A^c = (-\infty, 0] \cup \left(\bigcup_{k=1}^{\infty} \left(\frac{1}{k+1}, \frac{1}{k} \right) \right) \cup (1, +\infty)$

$(A^\circ)^\circ = (-\infty, 0) \cup \left(\bigcup_{k=1}^{\infty} \left(\frac{1}{k+1}, \frac{1}{k} \right) \right) \cup (1, +\infty) \Rightarrow \partial A = \{0\} \cup A = \bar{A}$

(2) $\forall (x, y) \in A, \exists r_1 = \frac{x-y+1}{\sqrt{2}}, \forall (x', y') \in B_{r_1}(x, y)$

$(x' - x)^2 + (y' - y)^2 < \frac{1}{2}(x - y + 1)^2 \Leftrightarrow 2(x'+1)^2 - 4(x'+1)(x+1) + 2(x+1)^2 - 2y'^2 + 4y'y - 2y^2 < (x+1)^2 - 2(x+1)y + y^2$

$\Leftrightarrow 2(x'+1)^2 + 2y'^2 + (x+1)^2 + y^2 < 4(x'+1)(x+1) + 4y'y - 2(x+1)y$

$\Leftrightarrow 2(x'-y'+1)^2 + 2\left(\frac{x-y+1}{\sqrt{2}}\right)^2 < 4\left[(x'+1)(x+1) + y'y - (x+1)y - (x'+1)y'\right]$
 $= 4(x'+1-y')(x+1-y)$

$\Leftrightarrow (x-y+1)^2 > 2\left[(x'-y+1)^2 + (x-y'+1)^2\right] + 4(x'+1)y + 4(x+1)y' - 4(x'+1)(x+1) - 4y'y$

$= (1^2 + 1^2)\left[(x'-y+1)^2 + (x-y'+1)^2\right] - 4(x'+1-y')(x+1-y)$

$\geq (x'+1-y + x+1-y')^2 - 4(x'+1-y')(x+1-y)$

$= (x-y+1)^2 + 2(x-y+1)(x'-y'+1) + (x'-y'+1)^2 - 4(x'+1-y')(x+1-y)$

$\Rightarrow 2(x'+1-y')(x+1-y) > (x'-y'+1)^2$

由 $x+1 > y$ 可推得 $y' < x'+1$

取 $r_2 = y$, $\forall (x', y') \in B_{r_2}((x, y))$

都有 $(x' - x)^2 + (y' - y)^2 < y^2 \Leftrightarrow 2y'y > (x' - x)^2 + y'^2$

由 $y > 0$ 可推出 $y' > 0$

所以取 $r = \min \left\{ \frac{x-y+1}{\sqrt{2}}, y \right\}$, $\forall (x', y') \in B_r((x, y))$

都有 $0 < y' < x' + 1 \Rightarrow (x', y') \in A \Rightarrow B_r((x, y)) \subset A$

因此 $A^\circ = A$

顯然 $\bar{A} = \{(x, y) \mid 0 \leq y \leq x+1\}$, $\partial A = \{(x, y) \mid (x \geq 1 \text{ 且 } y=0) \text{ 或 } (0 \leq y = x+1)\}$

(3) 設 $A = \{\vec{a}_1, \vec{a}_2, \dots, \vec{a}_k\}$

$\forall i \in \{1, 2, \dots, k\}$, 取 $r = \min_{\substack{1 \leq j \leq k \\ j \neq i}} \|\vec{a}_j - \vec{a}_i\|$, 則 $B_r(\vec{a}_i) \not\subset A$

$\Rightarrow A^\circ = \emptyset$

顯然 $A \cap A' = \emptyset$, $\forall \vec{x} \notin A$, 取 $r = \min_{1 \leq i \leq k} \|\vec{x} - \vec{a}_i\|$

則 $B_r(\vec{x}) \cap A = \emptyset$

因此 $A' = \emptyset$, $\bar{A} = A \cup \emptyset = A$

$A^c = \mathbb{R}^n \setminus A$, 顯然 A^c 是開集, 即 $A^c (A^c)^\circ = A^c$

因此 $\partial A = A$

2. $\forall (x, y) \in A$, $\forall r > 0$, $\exists (x', y') \in \mathbb{R}^2$, 使得 $\sqrt{(x' - x)^2 + (y' - y)^2} < r$ 且 x' 或 y' 是无理数.

$\Rightarrow (x, y) \notin A^\circ$

即 $A^\circ = \emptyset$

~~$\forall (x, y) \in A$, 構造數列 $\{(x + \frac{1}{k}, y + \frac{1}{k})\}$~~

~~$\lim_{k \rightarrow \infty} (x + \frac{1}{k}, y + \frac{1}{k}) = (x, y)$~~

~~$\Rightarrow (x, y) \in A'$~~

$\forall (x, y) \in \mathbb{R}^2$, 皆可構造有理數數列 $\{x_k\}, \{y_k\}$, $x_k \rightarrow x, y_k \rightarrow y (k \rightarrow \infty)$

$\Rightarrow A' = \mathbb{R}^2, \bar{A} = A \cup \mathbb{R}^2 = \mathbb{R}^2$

顯然 $(A^c)^\circ = \emptyset, \partial A = A$

年級：

科目：

3. 必要性: $\bar{p} \in \bar{A} \Rightarrow \bar{p} \in A \text{ 或 } \bar{p} \in A'$
 若 $\bar{p} \in A$, 則 $\bar{p} \in B_r(\bar{p}) \cap A \quad (\forall r > 0)$
 若 $\bar{p} \in A'$, 則 $B_r(\bar{p}) \cap A \neq \emptyset \quad (\forall r > 0)$
 $\Rightarrow B_r(\bar{p}) \cap A \neq \emptyset$

充分性: ~~若 $\bar{p} \in A$~~ , 則 若 $B_r(\bar{p}) \cap A \neq \emptyset$ 且 $\bar{p} \in A$, 則 $\bar{p} \in \bar{A}$
~~若 $\bar{p} \in A'$~~ 若 $B_r(\bar{p}) \cap A \neq \emptyset$ 且 $\bar{p} \notin A$,
 則 $\bar{p}$ 是凝聚點 $\Rightarrow \bar{p} \in A'$, 所以 $\bar{p} \in \bar{A}$

6. (1) 證: $\forall \bar{x} \in (A \cap B)^\circ \Leftrightarrow \exists r > 0$, 使得 $B_r(\bar{x}) \subset A \cap B$
 $\Leftrightarrow \exists r > 0$, 使得 $B_r(\bar{x}) \subset A$ 且 $B_r(\bar{x}) \subset B$
 $\Leftrightarrow \bar{x} \in A^\circ$ 且 $\bar{x} \in B^\circ$
 $\Leftrightarrow \bar{x} \in A^\circ \cap B^\circ$

因此 $(A \cap B)^\circ = A^\circ \cap B^\circ$

(2) 證: $\forall \bar{x} \in \overline{A \cup B} \Leftrightarrow \forall r > 0, B_r(\bar{x}) \cap (A \cup B) \neq \emptyset$
 $\Leftrightarrow \forall r > 0, (B_r(\bar{x}) \cap A) \cup (B_r(\bar{x}) \cap B) \neq \emptyset$
 $\Leftrightarrow \forall r > 0, B_r(\bar{x}) \cap A \neq \emptyset \text{ 或 } B_r(\bar{x}) \cap B \neq \emptyset$
 $\Leftrightarrow \bar{x} \in \bar{A} \text{ 或 } \bar{x} \in \bar{B}$
 $\Leftrightarrow \bar{x} \in \bar{A} \cup \bar{B}$

因此 $\overline{A \cup B} = \bar{A} \cup \bar{B}$

7. (1) $\{F_n\} = \left\{ \overline{B_{\frac{1}{n}}(\vec{0})} \right\}$ (2) $\{G_n\} = \left\{ B_{\frac{1}{n}}(\vec{0}) \right\}$

9. $\partial E = (E^\circ \cup (E^\circ)^\circ)^\circ$, 因為 E° 和 $(E^\circ)^\circ$ 都是開集, 所以 $E^\circ \cup (E^\circ)^\circ$ 也是開集
 則 ∂E 是閉集

$$12. \partial E = (E^\circ \cup (E^\circ)^\circ)^c$$

$$E \supset \partial E \Leftrightarrow \partial E \cap E^c = \emptyset \Leftrightarrow (E^\circ \cup (E^\circ)^\circ)^c \cap E^c = \emptyset$$

$$\Leftrightarrow (E^\circ \cup (E^\circ)^\circ \cup E)^c = \emptyset \Leftrightarrow ((E^\circ)^\circ \cup E)^c = \emptyset$$

$$\Leftrightarrow ((E^\circ)^\circ)^c \cap E^c = \emptyset \Leftrightarrow ((E^\circ)^\circ)^c \subset E$$

$$\Leftrightarrow E^c \subset (E^\circ)^\circ \quad \text{①}$$

$$\text{但是 } (E^\circ)^\circ \subset E^c$$

$$\text{因此上述 ①} \Leftrightarrow E^c = (E^\circ)^\circ \Leftrightarrow E^c \text{ 是開集} \Leftrightarrow E \text{ 是閉集}$$

練習題 13.4

2. $A \times B$ 是緊緻集 $\Leftrightarrow A \times B$ 是有界閉集 $\Leftrightarrow A$ 和 B 都是有界閉區間 $\Leftrightarrow A$ 和 B 都是緊緻集

練習題 13.6

2. (1) $D = \{(x, y, z) \mid xyz > 0\}$, 第一、三、六、八卦限

(2) $D = \{(x, y, z) \mid x^2 + y^2 + z^2 < 2\}$, 半徑為 $\sqrt{2}$ 的開球內的所有點

(3) $D = \{(x, y, z) \mid x \neq 0 \text{ 且 } y \neq 0\}$, z 軸以外的點

(4) $D = \{(x, y, z) \mid -1 \leq \frac{z}{\sqrt{x^2 + y^2}} \leq 1\}$

$$= \{(x, y, z) \mid \frac{z^2}{x^2 + y^2} \leq 1\} = \{(x, y, z) \mid x^2 + y^2 - z^2 \geq 0 \text{ 且 } (x, y \text{ 不同時為 } 0)\},$$

母線與 xy 平面成 45° 角的無限長圓錐的外部 (包括圓錐表面, 但不包括原點)

$$3. (1) \left| \frac{\sin(xy)}{x} \right| < \left| \frac{xy}{x} \right| < |y| \Rightarrow \lim_{(x,y) \rightarrow (0,0)} \frac{\sin(xy)}{x} = 0$$

$$(2) \text{ 取 } \sqrt{x^2 + y^2} < 1 \Rightarrow x^2, y^2 < 1$$

$$x^2 y^4 \leq x^2 y^2 \leq xy \leq \frac{1}{2}(x^2 + y^2)$$

$$\frac{(x^2 + y^2)^{\frac{1}{2}(x^2 + y^2)}}{(x^2 + y^2)^{\frac{1}{2}(x^2 + y^2)}} \leq (x^2 + y^2)^{\frac{1}{2}(x^2 + y^2)} < 1^{\frac{1}{2}(x^2 + y^2)} = 1$$

因為 $\lim_{(x,y) \rightarrow (0,0)} (x^2 + y^2)^{\frac{1}{2}(x^2 + y^2)} = 1$, 所以由夾逼定理知 $\lim_{(x,y) \rightarrow (0,0)} (x^2 + y^2)^{\frac{1}{2}(x^2 + y^2)} = 1$

培道中學校

姓名： (號)

年級：

科目：

成績

$$(3) \lim_{(x,y) \rightarrow (1,0)} \frac{\log(x+e^y)}{\sqrt{x^2+y^2}} = \frac{\log(1+1)}{1} = \log 2$$

$$(4) \left| \left(\frac{xy}{x^2+y^2} \right)^{x^2} \right| \leq \left(\frac{1}{2} \right)^{x^2} \Rightarrow \lim_{\substack{x \rightarrow +\infty \\ y \rightarrow +\infty}} \left(\frac{xy}{x^2+y^2} \right)^{x^2} = 0$$

$$(5) \left| \frac{x+y}{x^2+xy+y^2} \right| = \frac{|x+y|}{x^2+y^2-xy} \leq \frac{|x+y|}{2|xy|-xy} \leq \frac{|x+y|}{|xy|} = \left| \frac{1}{x} + \frac{1}{y} \right| \leq \left| \frac{1}{x} \right| + \left| \frac{1}{y} \right|$$

$$\Rightarrow \lim_{\substack{x \rightarrow \infty \\ y \rightarrow \infty}} \frac{x+y}{x^2+xy+y^2} = 0$$

$$(6) \text{ 記 } r = \sqrt{x^2+y^2}$$

$$0 < (x^2+y^2) e^{-(x+y)} = \frac{x^2+y^2}{e^{x+y}} = \frac{r^2}{e^r}, \quad \lim_{r \rightarrow +\infty} \frac{r^2}{e^r} = 0$$

$$\text{因此, } \lim_{\substack{x \rightarrow +\infty \\ y \rightarrow +\infty}} (x^2+y^2) e^{-(x+y)} = 0$$

$$5. (1) \lim_{x \rightarrow 0} \lim_{y \rightarrow 0} \frac{x^2 y}{x^4+y^2} = \lim_{x \rightarrow 0} \frac{0}{x^4} = 0 \quad (2) \lim_{x \rightarrow \infty} \lim_{y \rightarrow \infty} \sin\left(\frac{\pi x}{2x+y}\right) = 0$$

$$\lim_{y \rightarrow 0} \lim_{x \rightarrow 0} \frac{x^2 y}{x^4+y^2} = 0$$

$$\lim_{y \rightarrow \infty} \lim_{x \rightarrow \infty} \sin\left(\frac{\pi x}{2x+y}\right) = 1$$

$$(3) \lim_{x \rightarrow +\infty} \lim_{y \rightarrow 0^+} \frac{x^y}{1+x^y} = \frac{1}{2}, \quad \lim_{y \rightarrow 0^+} \lim_{x \rightarrow +\infty} \frac{x^y}{1+x^y} = 1$$

$$6. \lim_{x \rightarrow 0} \lim_{y \rightarrow 0} (x+y) \sin \frac{1}{x} \sin \frac{1}{y}$$

$$\text{取 } y_{1,k} = \frac{1}{2k\pi}, \quad \lim_{k \rightarrow \infty} (x+y_{1,k}) \sin \frac{1}{x} \sin \frac{1}{y_{1,k}} = 0$$

$$y_{2,k} = \frac{1}{2k\pi + \frac{1}{2}}, \quad \lim_{k \rightarrow \infty} (x+y_{2,k}) \sin \frac{1}{x} \sin \frac{1}{y_{2,k}} = x \sin \frac{1}{x}$$

所以 $\lim_{y \rightarrow 0} \lim_{x \rightarrow 0} (x+y) \sin \frac{1}{x} \sin \frac{1}{y}$ 不存在, 同理知 $\lim_{y \rightarrow 0} \lim_{x \rightarrow 0} (x+y) \sin \frac{1}{x} \sin \frac{1}{y}$ 不存在

但是

$$|(x+y) \sin \frac{1}{x} \sin \frac{1}{y}| \leq |x+y| \leq \sqrt{2} \cdot \sqrt{x^2+y^2}$$

$$\Rightarrow \lim_{(x,y) \rightarrow (0,0)} (x+y) \sin \frac{1}{x} \sin \frac{1}{y} = 0$$

7. 由題意可設 $\lim_{(x,y) \rightarrow (a,b)} f(x,y) (=A)$, $\lim_{x \rightarrow a} \lim_{y \rightarrow b} f(x,y) (=B)$, $\lim_{y \rightarrow b} \lim_{x \rightarrow a} f(x,y) (=C)$ 存在且有限

$$\Leftrightarrow \forall \varepsilon > 0, \exists \delta_1 > 0, \forall \sqrt{(x-a)^2 + (y-b)^2} < \delta_1, \text{ 有 } |f(x,y) - A| < \varepsilon \quad ①$$

$$\exists \delta_2 > 0, \forall 0 < |x-a| < \delta_2, \text{ 有 } \left| \lim_{y \rightarrow b} f(x,y) - B \right| < \varepsilon \quad ②$$

$$\exists \delta_3 > 0, \forall 0 < |y-b| < \delta_3, \text{ 有 } \left| \lim_{x \rightarrow a} f(x,y) - C \right| < \varepsilon \quad ③$$

$$\Leftrightarrow \forall \varepsilon > 0$$

$$\text{記 } \varphi(x) = \lim_{y \rightarrow b} f(x,y), \quad \delta(y) = \lim_{x \rightarrow a} f(x,y)$$

$$\Leftrightarrow \forall \varepsilon > 0, \exists \delta_{2,1}, \delta_{2,2} > 0, \forall 0 < |x-a| < \delta_{2,1}, \text{ 有 } |\varphi(x) - B| < \varepsilon \\ 0 < |y-b| < \delta_{2,2}(x) \text{ 有 } |f(x,y) - \varphi(x)| < \varepsilon \Rightarrow |f(x,y) - B| < 2\varepsilon$$

$$\Leftrightarrow \forall \varepsilon > 0, \exists \delta_{3,1}, \delta_{3,2} > 0, \forall 0 < |y-b| < \delta_{3,1}, \text{ 有 } |\delta(y) - C| < \varepsilon \\ 0 < |x-a| < \delta_{3,2}(y) \text{ 有 } |f(x,y) - \delta(y)| < \varepsilon \Rightarrow |f(x,y) - A| < 2\varepsilon$$

$$\text{取 } \delta_{2,1} < \frac{\delta_1}{2}, \delta_{2,2} < \frac{\delta_1}{2}, \text{ 則 } ② \Rightarrow 0 < \sqrt{(x-a)^2 + (y-b)^2} < \frac{\delta_1}{2} < \delta_1$$

$$\text{因此 } \forall \varepsilon > 0, \exists \delta_{2,1}, \delta_{2,2} > 0, \forall 0 < |x-a| < \delta_{2,1} < \frac{\delta_1}{2}, \text{ 有 } |f(x,y) - B| < 2\varepsilon \\ 0 < |y-b| < \delta_{2,2} < \frac{\delta_1}{2}, \text{ 有 } |f(x,y) - A| < \varepsilon$$

$$\text{此時, } |A-B| \leq |f(x,y) - A| + |f(x,y) - B| < 3\varepsilon$$

因為 ε 的任意性, 所以 $A=B$

同理即可證 $A=C$.

因此有 $A=B=C$.

練習題 13.7

1. (1) 記 $h(x,y) = \sqrt{x^2+y^2}$ $(x,y) \neq (0,0)$

$$\forall (x_0, y_0) \neq (0,0)$$

$$|\sqrt{x^2+y^2} - \sqrt{x_0^2+y_0^2}| \leq \sqrt{(x-x_0)^2 + (y-y_0)^2}$$

$$\lim_{(x,y) \rightarrow (x_0, y_0)} \sqrt{x^2+y^2} = \sqrt{x_0^2+y_0^2}$$

即 $h(x,y)$ 在 $\mathbb{R}^2 \setminus \{\vec{0}\}$ 內連續

則 $f(x,y) = \frac{1}{h(x,y)}$ 必在 $\mathbb{R}^2 \setminus \{0\}$ 內連續

又知 $\lim_{(x,y) \rightarrow (0,0)} \frac{1}{\sqrt{x^2+y^2}} = +\infty$, 所以間斷點集是 $\{(0,0)\}$

(2) $f(x,y)$ 在 $\mathbb{R}^2 \setminus \{(0,0)\}$ 內連續

只需分析在 $(0,0)$ 處的連續性。取 $(x_k, y_k) = (\frac{1}{k}, 0) \rightarrow (0,0)$

$$\lim_{k \rightarrow \infty} \frac{(\frac{1}{k}) + 0}{(\frac{1}{k})^2 + 0^2} = +\infty \Rightarrow \text{間斷點集是 } \{(0,0)\}$$

2. $\forall (x_0, y_0) \in ([0,1] \times [0,1]) \setminus \{(1,1)\}$

$$\left| \frac{1}{1-xy} - \frac{1}{1-x_0y_0} \right| = \frac{|xy - x_0y_0|}{|(1-xy)(1-x_0y_0)|} = \frac{|(x-x_0)(y-y_0) + x_0y - x_0y_0|}{|(1-xy)(1-x_0y_0)|}$$

$$= \frac{|(x-x_0)y + x_0(y-y_0)|}{|(1-xy)(1-x_0y_0)|} \leq \frac{1}{1-x_0y_0} \left(\frac{|x-x_0|y}{1-y} + \frac{x_0|y-y_0|}{1-y} \right) \quad (1)$$

$$\text{取 } \delta < \frac{1-y_0}{2} \Rightarrow y < \frac{y_0+1}{2}, \text{ 所以 } (1) \leq \frac{1}{1-x_0y_0} \cdot \frac{2}{1-y_0} \cdot \left(\frac{y_0+1}{2} |x-x_0| + x_0|y-y_0| \right)$$

$$\leq \frac{2\sqrt{2}}{(1-x_0y_0)(1-y_0)} \sqrt{(x-x_0)^2 + (y-y_0)^2}$$

$$\text{取 } \delta = \min \left(\frac{1-y_0}{2}, \frac{(1-x_0y_0)(1-y_0)}{2\sqrt{2}} \varepsilon \right), \text{ 有 } \left| \frac{1}{1-xy} - \frac{1}{1-x_0y_0} \right| < \varepsilon$$

$$\Rightarrow f(x,y) = \frac{1}{1-xy} \text{ 在 } [0,1]^2 \setminus \{(1,1)\} \text{ 內連續}$$

但是, 取 $\vec{a}_k = (1, \frac{k}{k+1})$, $\vec{b}_k = (1, \frac{k+1}{k+2})$

雖然 $\|\vec{a}_k - \vec{b}_k\| = \frac{k+1}{k+2} - \frac{k}{k+1} = \frac{1}{k+1} - \frac{1}{k+2} < \frac{1}{k+1} < \frac{1}{k}$

但是 ~~但是~~ $|f(\vec{a}_k) - f(\vec{b}_k)| = |k+1 - (k+2)| = 1$

所以 $f(x, y) = \frac{1}{1-xy}$ 在 $[0, 1]^2 \setminus \{1, 1\}$ 內不一致連續

3. (i) $\forall \vec{p} \in \mathbb{R}^n$, 若 $P(\vec{p}, A) = 0$,
~~可證~~

3. (i) 記 $B = \{\vec{p} \in \mathbb{R}^n \mid P(\vec{p}, A) = 0\}$

(i) $\forall \vec{a} \in A$, $P(\vec{a}, A) = 0 \Rightarrow \vec{a} \in B$
 $\Rightarrow A \subset B$

(ii) $\forall \vec{a}' \in A'$, $\forall r > 0$, 都有 $B_r(\vec{a}') \cap A \neq \emptyset$
 $\Rightarrow \rho(\vec{a}', A) = \inf_{\vec{a} \in A} \{\|\vec{a}' - \vec{a}\|\} = 0 \Rightarrow \vec{a}' \in B$

$\Rightarrow A' \subset B$

因此 $\bar{A} = A \cup A' \subset B$

反過來, $\forall \vec{b} \in B$, 都有 $P(\vec{b}, A) = 0 \Rightarrow \forall r > 0$, $B_r(\vec{b}) \cap A \neq \emptyset$
 $\Rightarrow \vec{b} \in \bar{A}$

因此 $\bar{A} = B$

(2) ~~若 $\vec{q} \notin \bar{A} \Leftrightarrow \vec{q} \in \bar{A}^c$~~

~~因為 A 是閉集, 所以 $\bar{A}^c$ 是開集~~

~~因此 $\exists r > 0$, 使得 $B_r(\vec{q}) \subset \bar{A}^c$. 因此 $P(\vec{q}, A) \geq P(\vec{q}, \bar{A}) > r$~~

~~選定 $\vec{a}_0 \in A$, 有 $r < P(\vec{q}, \bar{A}) \leq P(\vec{q}, A) \leq \|\vec{q} - \vec{a}_0\|$~~

(2) 考慮 $\vec{a} \in \mathbb{R}^n$, 記 $r(\vec{a}) = P(\vec{a}, A)$

因此 $\forall n \in \mathbb{N}^+$, $B_{r(\vec{a}) + \frac{1}{n}}(\vec{a}) \cap A \neq \emptyset$, 取 $\vec{x}_n \in B_{r(\vec{a}) + \frac{1}{n}}(\vec{a}) \cap A$

記 $F_n = B_{r(\vec{a}) + \frac{1}{n}}(\vec{a}) \setminus B_{r(\vec{a})}(\vec{a})$, $\text{diag } F_n$

顯然 $\vec{x}_n \rightarrow \vec{a} (n \rightarrow \infty)$, 因此 $\vec{a} \in \bar{A} \Rightarrow P(\vec{a}, A) = \|\vec{a} - \vec{x}\|$

成績

即 $\forall \vec{a} \in \mathbb{R}^n$, ~~$\exists \vec{x}(\vec{a})$~~ $\exists \vec{x}(\vec{a}) \in \bar{A}$, 使得 $P(\vec{a}, A) = \|\vec{a} - \vec{x}(\vec{a})\|$

因此 ~~$\forall \vec{p}, \vec{q} \in \mathbb{R}^n$~~

$\forall \vec{p}, \vec{q} \in \mathbb{R}^n$, $\exists \vec{x}(\vec{p}), \vec{x}(\vec{q}) \in \bar{A}$, 使得 $P(\vec{p}, A) = \|\vec{p} - \vec{x}(\vec{p})\|$, $P(\vec{q}, A) = \|\vec{q} - \vec{x}(\vec{q})\|$

由三角不等式知

$$\|\vec{p} - \vec{q}\| + \|\vec{q} - \vec{x}(\vec{q})\| \geq \|\vec{p} - \vec{x}(\vec{q})\| \geq \|\vec{p} - \vec{x}(\vec{p})\|$$

$$\|\vec{p} - \vec{q}\| + \|\vec{p} - \vec{x}(\vec{p})\| \geq \|\vec{q} - \vec{x}(\vec{p})\| \geq \|\vec{q} - \vec{x}(\vec{q})\|$$

所以 $P(\vec{p}, A) - P(\vec{q}, A) \leq \|\vec{p} - \vec{q}\|$ 且 $P(\vec{q}, A) - P(\vec{p}, A) \leq \|\vec{p} - \vec{q}\|$

$$\Leftrightarrow |P(\vec{p}, A) - P(\vec{q}, A)| \leq \|\vec{p} - \vec{q}\|$$
